

The NATO Codification System as the Foundation for eOTD and ISO Standards 22745 and 8000

Steven Arnett

October 27, 2011

steven_arnett@yahoo.com

What is the NATO Codification System?

- A **common supply language that is computer sensible and can be used** throughout all logistic operations
- Language independence: Item identification and description can be stored and exchanged in an encoded format and output into the national language of the using country
- Enables **interoperability**
- Optimizes resource management by **minimizing duplication** in inventories

Cataloging = Codification

The NATO Codification System

Facilitates logistic (co-)operation by using a uniform and common system for:

Identification

Classification

Stock Numbering

of items of supply

The NATO Codification System

- Used officially by 63 countries around the world and translated into 19 languages
- Created for military use but principles can easily be applied to civilian industry and logistics operations

NCS Users: A Global Standard

35 Sponsored Non-NATO nations :

8 Tier 2 :

27 Tier 1 & 2 in preparation :

**A unique system of
identification**

Armed forces' interoperability

- strict stock management**
- *spare part control***
- *stock comparison***

***OPERATIONAL
EFFICIENCY***

***SUBSTANTIAL
SAVINGS***

Why the NCS Was Created

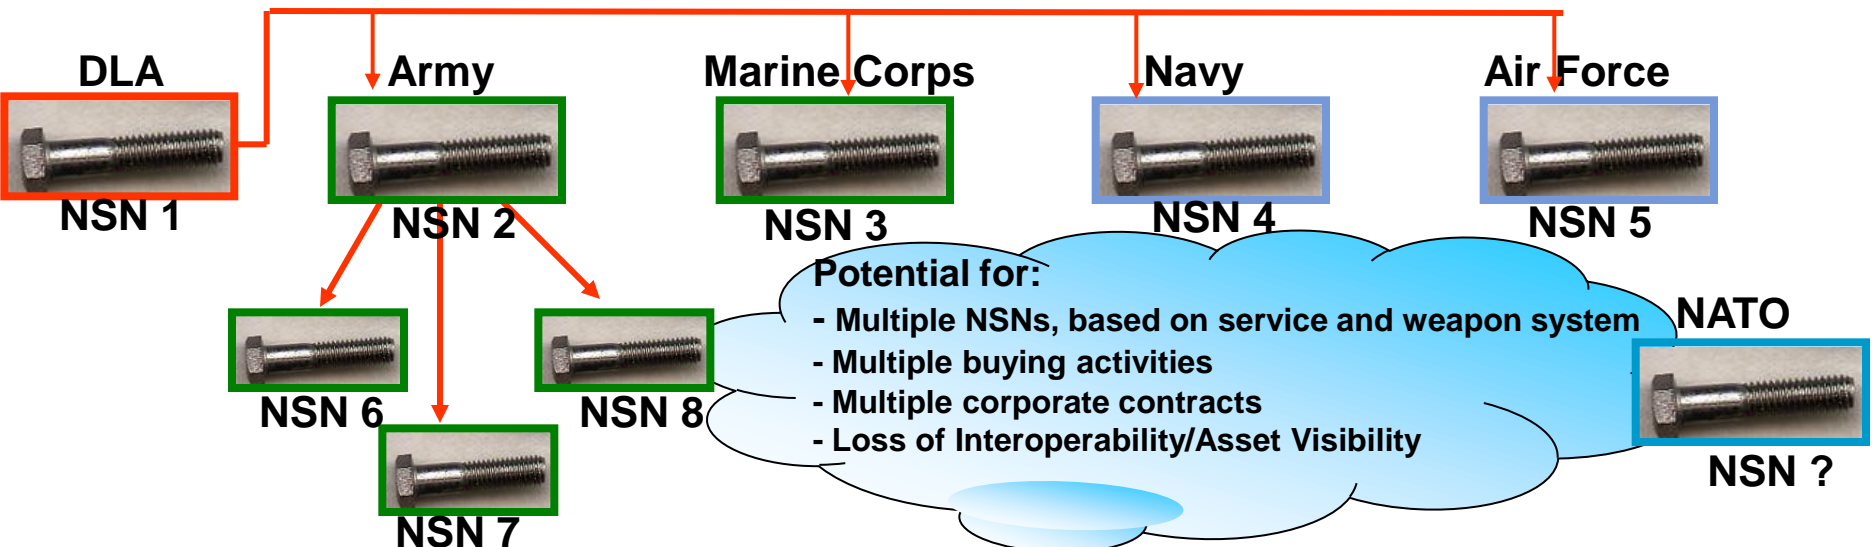

DLA NSN 1

Each military service
uses their own logistics

What Types of Items Are Assigned NSNs?

- All the spare parts that are needed to maintain planes, tanks, ships and other systems used by military forces
- Everything needed to support soldiers, sailors, airmen and marines, including uniforms, food, weapons, medical items and pharmaceuticals
- Everything needed to support the administration of defense departments and civilian agencies
- **The NCS incorporates a large percentage of all the manufactured items made in the world**

The Scope of the NCS

- More than 40,000 structured and defined Item Names
- More than 25,000 properties to describe items
- More than 150,000 property values to discriminate one item from another

Benefits of the NATO Codification System

BEFORE

More Inventory + Multiple Procurements + No Visibility of Assets Across Services = Wasted Resources

- Standard Data Elements
- Item of Supply Concept
- Single Manager

AFTER

Less Inventory + Consolidated Buys + Sharing Of Assets = More Effective Force

Result = Big Savings

Benefits of the NCS

■ Operational

■ Economic

■ Flexibility

■ Interoperability

Relations With Industry

Environment

NATO AC/135 and International Standards

- NATO Allied Committee 135 engaged with ISO and other standards organizations for the following reasons:
 - To automate the codification process
 - To improve the quality and availability of data
 - To help align the NCS with international standards
 - To increase cooperation with industry

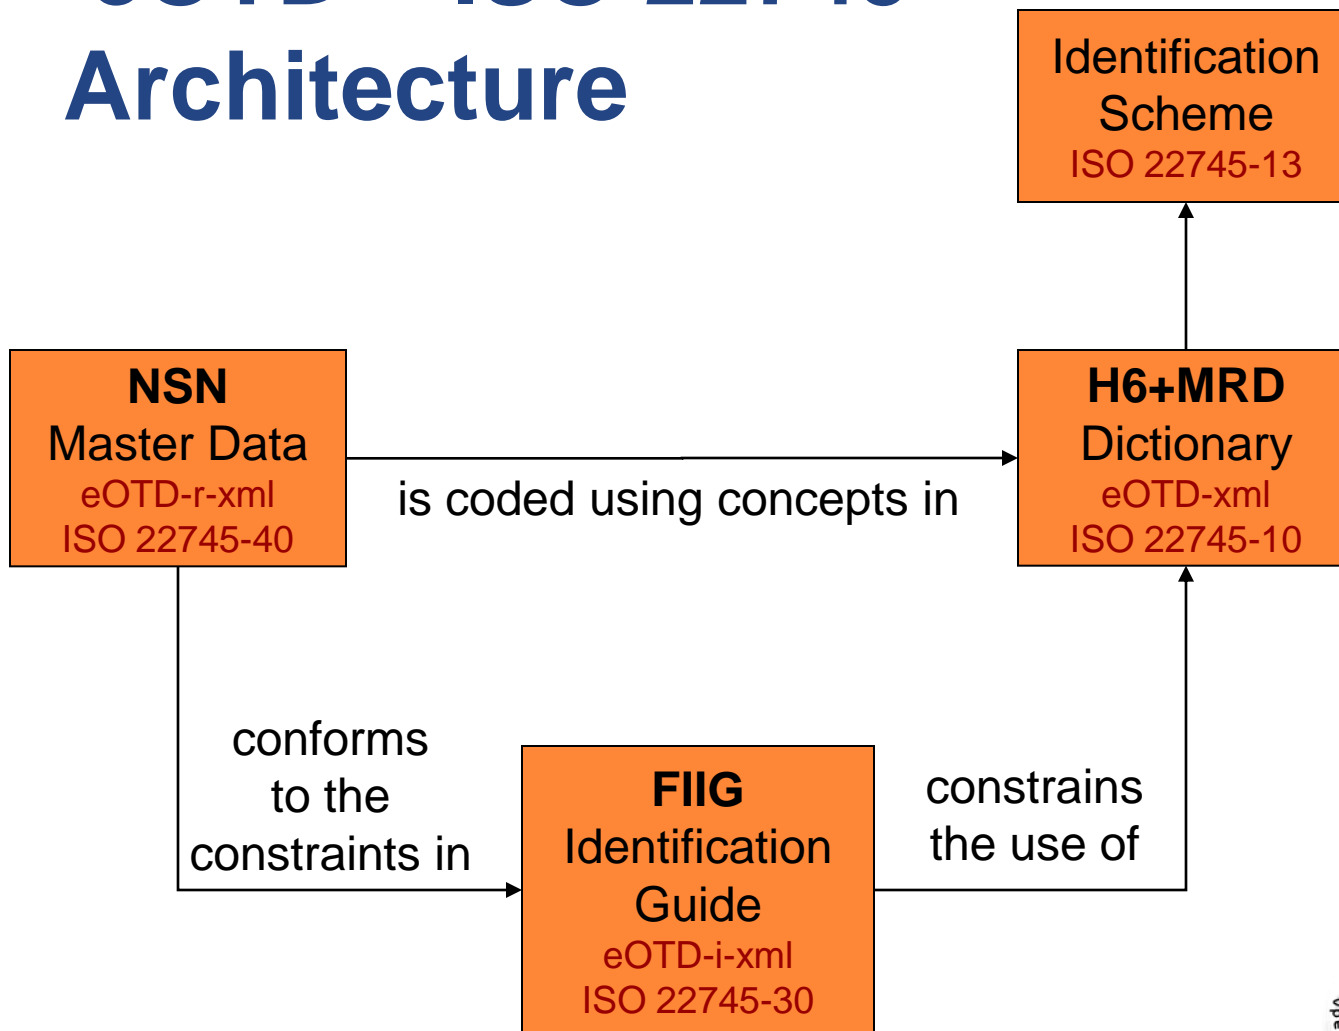

International Standards

- ISO 22745 is a standard for master data based on the NATO Codification System (NCS) but designed for industry and incorporating a modern data architecture
- ISO 8000 is a standard for measuring and certifying data quality
- ISO 22745 and 8000 are managed by ISO Technical Committee 184/Subcommittee 4 (Industrial Data)

NCS – eOTD – ISO 22745 Architecture

The eOTD is a foundation for design collaboration and industry standards.

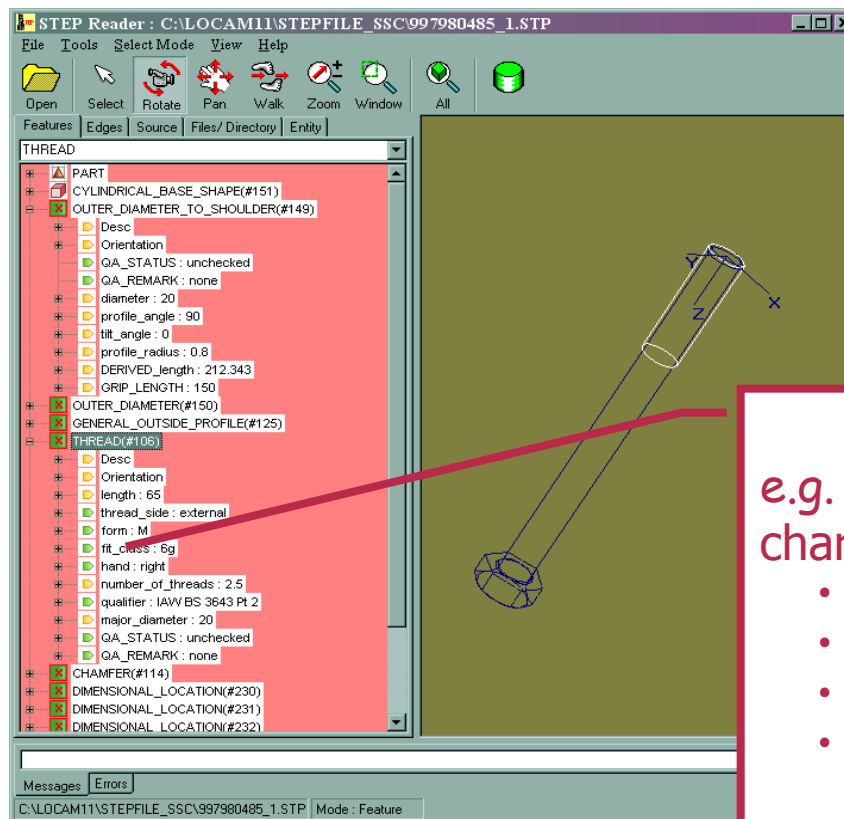

ISO 22745 and the eOTD are the foundational enablers for the breakthrough our industry needs in the next generation of direct, accurate, and effective collaboration across the supply chain at meaningful and granular levels of data exchange never before imagined.

Faster - Better - Cheaper

Automated Cataloging

ISO 8000-110:2008 CERTIFICATION IDENTIFIES A BUYER, ITEM MANAGER OR USER, AS THE DATA REQUESTOR AND A SUPPLIER OR MANUFACTURER AS THE DATA PROVIDER

AC/135 Pilot Projects

- AC/135 has undertaken several projects to test the feasibility of using 22745 and 8000 to facilitate automated cataloging
- Those projects comprise the Smart STEP Codification (now Supplier Sourced Codification) series
- Partners have included ECCMA, Patria, BAE, and Rockwell Automation

Benefits of ISO 22745 for Government

- Opportunities for improvement of NATO/DLIS system through increased industry participation
- Promotes NCS approach as an ISO standard
- Faster access to better industrial data

Goal: Electronic transfer of characteristic data from our suppliers and manufacturers to NCBs
