About the Venue: EIT

The George W. Donaghey College of Engineering and Information Technology (EIT) is part of the University of Arkansas at Little Rock (UALR), a premier public university founded in 1927 in the center of Arkansas. UALR founded the EIT in 1999 to prepare students to meet the specific job skill needs of the area's growing high-tech business community.

In 2010 UALR completed a six-floor facility for the EIT using green building technology. The building serves approximately 1,000 students from all over the state and country and from 38 different countries around the world. More than 50% of those enrolled in the college are first-generation college students.

Since the part of the EIT's mission is to educate the next generation of engineers, it was fitting for the building team to use cutting-edge, green building strategies and work towards Leadership in Energy and Environmental Design (LEED) certification.

About University of Arkansas at Little Rock (UALR)

UALR was founded in 1927 and is part of the University of Arkansas System of two research universities, seven community colleges, a medical school, a presidential school, two law schools, and a residential mathematics and science high school, enrolling more than 60,000 students.

UALR Academic Programs:

155 programs of study

61 baccalaureate programs

39 master's programs

20 graduate certificates

10 doctoral programs

14 certificates of proficiency

3 technical certificate programs

8 associate degree programs

UALR Campus:

More than 250 acres

57 campus buildings and facilities

2.9 million square feet maintained

The UA Little Rock
Information Quality Graduate Program

UA Little Rock has the only Information Quality Graduate Program in the United States. The program was founded in 2006 as a collaboration among Acxiom Corporation, the MIT Information Quality Program, and the University of Arkansas at Little Rock Donaghey College of Science, Technology, Engineering, and Mathematics. The program started with 24 students in Fall 2006 enrolled in a 33 credit-hour Master of Science in Information Quality. Since then, the program has grown to include a 12-hour Graduate Certificate in Information Quality and a 75-hour, interdisciplinary Computer and Information Sciences PhD program with a concentration in Information Quality as well as concentrations in Computer Science and Information.

The core curriculum offers a unique combination of studies. In addition to traditional information technology topics such as systems analysis and database systems, student also study information visualization, information quality principles, practices, and tools, and important data management topics including data governance, project management, and change management. Several courses incorporate ISO 8000 standards as part of their curricula.

All three programs are now offered both on-campus and fully online. As of August 2024, the program has awarded 392 MS, 44 PhD, and 137 Certificate degrees in Information Quality. Many of our students are working in major industries and universities, and several have become Chief Data Officers of their organizations.

About Little Rock

Little Rock (founded 1821), the capital of Arkansas, is a city of approximately 200,000 on the Arkansas River.
